

NATUFLOC PLUS

Process additive for improving wort clarification and downstream processing efficiency

In brewing, achieving effective clarification and separation during wort processing is essential for maintaining product quality, filtration efficiency, and overall process consistency.

Natufloc Plus is a specialized process additive designed to support improved clarification and handling during wort processing stages.

Mode of Action

Natufloc Plus is applied during brewing process stages to support clarification and process stability:

- Assists in improving separation of haze causing materials (Trub) from wort in whirlpool.
- Supports downstream process performance during key stages such as chilling and aeration.

Product Key Benefits

- Supports improved wort clarification
- Enhances downstream processing efficiency
- Contributes to better process consistency

Product Application

Applicable in brewing processes during stages such as:

- Post wort boiling in wort kettle
- In Whirlpool

Dosage

- 2 to 6 Gm/Hl

Product Characteristics

- Form: Powder
- Appearance: White to Off white

Product Packaging

- Available in 25 Kg HDPE Drums

Product Shelf Life

- Maximum 12 months below 10°C under cold and dry conditions

Product Handling

- Store under cold and dry conditions
- Avoid moisture exposure
- Use appropriate PPE during handling
- Follow MSDS guidelines for safe handling

ISO 9001:2015 Certified | FSSC 22000 Certified
