

NATUNUTR

Balanced yeast nutrient blend for improved fermentation rate and yeast health in brewing

In brewing, especially under high gravity conditions or advanced filtration systems, yeast performance can be limited due to nutrient deficiencies, leading to slower fermentation and reduced attenuation.

Natunutr is a well-balanced nutrient formulation designed to enhance yeast health, improve fermentation rates, and ensure consistent fermentation performance across brewing processes.

Mode of Action

Natunutr provides a comprehensive nutrient system for yeast metabolism:

- Supplies essential minerals such as zinc, magnesium, manganese, and potassium
- Provides vital nutrients including nitrogen and phosphorus for yeast growth
- Enhances yeast viability and metabolic activity, improving fermentation efficiency
- Supports consistent attenuation under high gravity and modern brewing conditions

Product Key Benefits

- Increases fermentation rate
- Maintains yeast health and viability
- Improves attenuation and fermentation efficiency
- Does not impart odour to beer
- Does not affect taste or flavour profile

Product Application

Applicable in brewing fermentation processes, especially:

- High gravity wort systems
- Advanced mash filter systems (e.g., Meura, Nordon, Landaluce)

Used during fermentation and applied in every cycle to maintain yeast health.

Operational Conditions

- Temperature: Best suited to fermentation conditions
- pH: 4.0 – 5.0

Dosage

- 5–10 g per HL (50–100 ppm on wort volume)

Product Characteristics

Composition: Food-grade mineral salts & vegetal extracts

Form: Powder

Appearance: White to off-white

Product Packaging

- 25 kg HDPE drums

Product Shelf Life

- 12 months below 25°C (store in cool conditions, protected from light & oxygen)

Product Handling

Enzymes and nutrient powders may generate dust or aerosols and require careful handling:

- Avoid inhalation of dust or aerosols
- Use PPE including gloves, protective clothing, and eye/face protection
- Avoid splashing and dust formation
- Spilled product should be flushed with water
- Wash contaminated clothing before reuse
- Follow MSDS guidelines for safe handling
